📋 Assignment: AI Workflow & Agent Design

Role: AI Agent Development Intern
Organization: Vriddhikar Society (Non-Profit – Transforming Education)

🎯 Objective

This assignment is designed to evaluate:

- Your **ability to think in automation workflows**
- Your **prompt engineering skills**
- Your **problem-solving ability**
- Your **understanding of AI tools and agent systems**
- Your **clarity in documenting solutions**

You are required to **design a simple AI-powered workflow (AI Agent)** that can automate a small operational task.

We are evaluating your **thinking, structure, and approach**, not complex coding.

📌 Important Instructions

1. Assume you are building an **AI automation system for an internal team**.
2. Your solution should automate **a real operational task**.
3. Examples of tasks you may automate:

- Application screening
- Email reply automation
- Research summarization
- Meeting notes generation
- FAQ answering
- Data organization
- Report generation

© Scoreazy Edutech Private Limited | All rights reserved

4. You may use any AI tools such as:
- ChatGPT
- Claude
- Gemini
- Zapier
- Make (automation platform)
- Google Sheets

5. You do **not need to build a full working software system**.
6. Your task is to **design the workflow and demonstrate how AI would automate it**.

🧠 Assignment Task

Design a **simple AI-powered automation workflow** that can perform a useful internal task with **minimal human intervention**.

Your solution should demonstrate:

- Logical workflow thinking
- Effective prompt usage
- Clear documentation

📊 Structure Required in the Submission

🔹 1: Problem Statement

Describe a **small operational problem** that AI can solve.

Examples:

- HR receives many job applications and needs faster screening.
- Teams receive repetitive emails requiring similar replies.
- Research data needs quick summarization.
- Meeting notes need to be organized automatically.

Explain:

- What is the problem?
- Why would AI automation help?

(Limit: 100–150 words)

2: AI Workflow Design

Explain **step-by-step how your AI automation system will work**.

Example structure:

Step 1
Input is received (form, email, document, etc.)

Step 2
AI processes the information

Step 3
AI generates output or classification

Step 4
Result is stored or sent automatically

You may present this as:

- Numbered steps
- Flowchart
- Bullet points

3: Prompt Engineering

Provide the **exact prompts you used to interact with the AI tool**.

Example:

Prompt Example:

"Analyze the following resume and rate the candidate from 1–10 based on relevance to a Product Intern role. Also provide a short summary of the candidate's strengths."

This section helps us understand:

- How clearly you write prompts
- How well you guide the AI system

© Scoreazy Edutech Private Limited | All rights reserved

🔹 4: Sample Input & Output

Show 1–2 examples of:

Input given to the AI system
Output generated by the AI

Example:

Input: Resume text
Output: AI-generated summary and score

🔹 5: Tools Used

Mention the tools used while designing your solution.

Example:

- ChatGPT for prompt testing
- Google Sheets for workflow tracking

🔹 6: Automation Logic (Optional but Recommended)

Explain how the workflow could run with minimal human intervention.

Example:

- Trigger when a new application is received
- AI processes the data automatically
- Output is stored in a tracking sheet
- Notification is sent to the team

⚙️ Mandatory Functionalities to Use

Your submission must demonstrate:

- ✅ Structured workflow thinking
- ✅ Clear prompt engineering
- ✅ Practical AI tool usage
- ✅ Clear documentation of logic

📂 Deliverables

You must submit your final work using the Assignment Submission Form.

1️⃣ What You Must Submit

Submit **one document (PDF or Google Doc)** containing:

- Problem statement
- Workflow explanation
- Prompts used
- Sample inputs & outputs
- Tools used

2️⃣ File Naming Format

Use this format:

FirstName_LastName_AIAgentIntern
Example:RiyaSharma_AIAgentIntern

3️⃣ Submission Link

Submit here:

🔗 https://forms.gle/QBkqtkENVweeNjKz8

In the form, include:

- Your full name
- Sheet link
- Explanation document link
- A short note describing:
  - Your approach
  - Challenges faced
  - Any smart logic or feature added

⏳ Estimated Effort

2–3 hours
